BOOK SYNOPSIS

This book is written for both doctors and patients (or for all curious readers) and explains treatment with HIFU (High Intensity Focused Ultrasound). With this technology we can treat successfully Benign tumours (Uterine Fibroids, Uterine Adenomyosis, Breast Fibroadenoma) and Malignancies (Liver, Pancreas, Bone, Breast, Kidney, Soft Tissue, Metastatic cancers). Thanks to HIFU today we can make surgery without a scalpel and cuts - with ultrasound we can treat tumours with very high accuracy and precision, without any damages of the surrounding tissue! As incredible as it sounds, this technology is so new, that even most doctors are not familiar with HIFU. One of the reasons is that until now there wasn't published such a book about HIFU technology, despite of the fact that there are HIFU centers in 12 countries. More than 40000 patients all over the world have been treated with HIFU. If Steve Jobs has read this book, he might have been alive today, because HIFU treatment of pancreatic cancer is without analogue now, supporting chemotherapy and improving quality of life. With HIFU, we can treat successfully also Uterine Fibroids (Myomas), which are very common and 20% of women may have fibroids during their childbearing (reproductive age). For the women with myomas that want pregnancy, the HIFU treatment is the best approach, because there is no surgery, no complications and the possibility for successful pregnancy is highest in comparison to other methods for treatment of Uterine Fibroids.
